

SOIL SOLUTIONS ORGANIC PLANT FERTILITY OPTIONS

Mega Worm® Earthworm Castings

Worm castings, also known as vermicast, contain water-soluble nutrients that greatly enhance soil conditioning. Our superior quality worm castings use only African night crawlers, raised in organic bedding with no toxic materials. Richer in many nutrients than compost produced by other methods, worm castings are also rich in microbial life, which convert nutrients already available in the soil into plant-ready forms. Unlike other compost, worm castings also contain worm mucus, which helps prevent nutrients from washing away with the first watering and holds moisture better than plain soil.

Safe and pet-friendly, our worm castings are an essential part of taking your gardening to the next level. Superior quality, 100% pure! Tests confirm high soil microbial counts. Vital Earth's® Mega Worm® earthworm castings promote enhanced germination, root growth, plant growth, crop yield & water holding capacity in soils. May help to improve physical structure of soil. Excellent for use in compost tea!! *100% earthworm castings are black and roll when touched.

Available in: 30L/1.1cu.ft. bags (50 per pallet) & 2yd. totes

Amendment Rate: One 30L Mega Worm® bag to 10 cu. ft. of growing media.

Top dressing: 1/2 of a 30L bag of Vital Earth's® Mega Worm® per established planting. Use 1 time during vegetative cycle. Use 2 times during fruit and flower cycle, 1 month apart, but not recommended within last 3 weeks before harvest.

Compost tea: Use in conjunction with Vital Earth's® Mega worm®, Organic Compost OMRI™, and Bat Guano. ([see tea recipe](#))
